

ARMACELL SOLUTIONS

Multi-family

Urbanization is one of the trends driving multi-family construction. In the US more than 80% of our population lives in urban areas where they can be close to employment opportunities, mass transit, better education and healthcare options. And all those people need somewhere to live. Energy efficiency is an important aspect of operating a multi-family complex. Armacell has innovative insulation solutions engineered for multi-family buildings.

ABOUT ARMACELL

We are the inventors of flexible foams for equipment insulation and a leading provider of engineered foams. Our lightweight thermal, acoustic and mechanical solutions create sustainable value for our customers. Day in and day out, our products significantly contribute to global energy efficiency, urbanization, lightweighting, the globalization of food supplies and acoustic comfort. Our product solutions stand out in terms of functionality and ease of installation.

// Passionate

Dedicated and professionally-minded employees with an entrepreneurial spirit are our greatest asset. They share a common set of core values: customer experience, commitment, empowerment and accountability, integrity and sustainability.

Armacell.

Making a difference around the world.

SOLUTIONS

ENABLING ENERGY SAVINGS

// Innovative

We develop new technologies and focus on products that deliver superior technical performance. Now in its seventh generation, ArmaFlex® is the original flexible elastomeric foam insulation material for superior condensation control and thermal performance. Our most recent product launches include ArmaFlex Ultra, the first elastomeric insulation Classified by UL to UL 723 at 25/50.

// Consumer-centric

We create genuine value for our customers, value them as partners, and are committed to developing solutions tailored to their requirements. The outcome is added value for our business partners and, most significantly, energy savings and a longer working life for their critical equipment.

// Sustainable

We dedicate our business activities to advancing and optimizing energy efficiency for equipment and to closing the loop to achieve a more sustainable use of resources. Our ArmaFlex insulation saves 140 times more energy than is required for its production and prevents the emission of several million tons of CO₂ per year.

140 x MORE
ENERGY
SAVED

MULTI-FAMILY SOLUTIONS

Multi-family buildings have different HVAC and plumbing requirements than single-family homes. Design priorities in multi-family living arrangements include managing peak energy load, delivering room-to-room comfort control, and optimizing the overall system for maximum efficiency. Once these issues are dealt with, a designer must also consider overall cost and building aesthetics.

Whether the challenge is a historic building renovation or a new construction high-rise apartment, the proper insulation system can help achieve goals in LEED® certification, best-in-class noise and thermal control, and lower overall utility and maintenance costs.

POPULARITY AND TRENDS

Energy efficiency and improved performance are two important drivers promoting next-generation product systems for multi-family construction. For example, these concepts have begun conversations on whether or not to use heat pumps in HVAC applications, tank-less water heaters, and complete Wi-Fi control of all utility systems! Apartments, student housing, mixed-use buildings, and age-restricted living arrangements are all focusing on similar goals in providing smarter, healthier, and all-inclusive living environments.

32%

of property managers say energy efficiency is their top challenge.

Maintenance at 31%¹

¹ Click this link to Source Information

Empty-nesters, young families, and individuals alike make up the growing population of multi-family dwelling members. Approximately 1 in 5 US citizens choose multi-family living because of its affordability and amenity inclusion. Investors relish the opportunity to build and manage these properties because of their growing popularity and manageable return on investment. The attractiveness to both investor and tenant is almost entirely reliant on the modern quality and reliability of the living arrangement's components and make-up. Insulation may seem a small factor in helping provide these qualities, but make no mistake, the insurance of an innovative and modern insulation system is undeniable.

HEATING/COOLING METHODS

Heating and cooling challenges within multi-family buildings are abundant. Vertically and horizontally oriented building designs create distinct design challenges. Although heating and cooling requirements will vary per building and room, the end-goal of meeting efficiency and space requirements while maintaining sustainable practices in the structure, is paramount. A building may be required to operate with a particular program during the day and then an alternate program at night.

Multi-family buildings could require a number of heating and cooling solutions

operating as an integrated system. Within the same building, a condenser water system could service residential floors via water-source heat pumps with VAV (variable air volume) in the recreation floors and common areas. Additionally, VRF (variable refrigerant flow) could be used to cool management offices while the resultant hot

and cold water is used to heat and cool the lobby area via radiant technologies. A top priority for multi-family building design is management and reliability of these systems. Simplicity in design, ease of installation, and immediate access for operational maintenance remain areas of particular importance.

Given the increased usage of varied ducting and plumbing within vertical multi-family structures, issues of moisture intrusion can reach unmanageable levels during operation if not properly accounted for. If, for instance, insulation gets wet then that moisture could lead to mold problems that may go undetected for months or even years simply as a result of the physical constraints of the construction envelope. Additionally, refrigerant piping is a constant culprit for condensation build up and even refrigerant leaks over time. As this piping traverses the inner workings of a building, the risk of moisture damage increases exponentially. Designing a system with the most protective insulation barrier is insurance any designer can afford.

Since multi-family buildings can contain scores of different air-conditioning technologies, it is safe to assume that the

noise from the fans and blowers inherent to these technologies will bring along unpleasant noises and acoustic ailments. While insulation can be used to preserve air quality and temperature, the acoustic benefits should not be taken for granted in designs mitigating confined spaces. For example, air-handling units cooling a fitness center require specific acoustic conditioning to maintain the acoustic comfort of occupants in a neighboring residential area. Lining and wrapping ductwork with closed cell insulation helps manage audio frequencies specific to air-handlers and potential microbial growth common to open-cell insulation types.

INNOVATIONS

It is important for designers to note the increasing population choosing apartment and multi-family living. Innovation will be required to manage the residual effects of increased population density and resource demand in these facilities. Topics like passive fire control, uniform equipment systems, and increased integration of dissimilar technologies already present opportunities for innovation in the mixed-use design of today. As custom HVAC and plumbing solutions become increasingly sought after, designer reliability and consistency will become an increasingly important standard by which these facilities are developed.

LEED certification is also increasingly popular. While it is a benefit for building owners and tenants, demanding limitations will be placed on technology selection and implementation. Appropriate selection of materials and equipment that help qualify buildings for LEED certification is necessary if an owner wishes to achieve long-term durability and lower maintenance costs. Insulation systems should provide both of these things. **At Armacell, innovation gets you there.**

INSULATION DESIGNED FOR THE CHALLENGES OF MULTI-FAMILY BUILDING APPLICATIONS

The one thing all of these design variables have in common is the need for proper insulation. Armacell's insulation systems are ideal for insulating chilled water piping, chillers, cooling tanks and air handlers. Insulating pipes, refrigeration lines or cooling systems not only promotes energy efficiency, but it also prevents condensation on below-ambient temperature surfaces — a critical issue for multi-family facilities and communities.

Specifying Armacell Systems for multi-family buildings is a smart move. Armacell uses fiber-free, formaldehyde-free, low VOC formulation for its foam insulation, which makes it an excellent option for any

environment, eliminating particulate that can jeopardize air quality and equipment. Closed-cell structures also prevent moisture ingress and naturally resist growth of mold and mildew. Most importantly, the flexible nature of Armacell's insulation means it installs easily in tight spaces in floors, walls or ceilings. You can count on Armacell insulation retaining its thermal integrity over time, lasting well into your future. ■

STAKEHOLDER: MECHANICAL ENGINEERS

Specifiers Hold the Keys to Project Success

At Armacell, we know that the specifier is the key to a successful mechanical insulation system. We believe that providing the mechanical engineer or system designer with the knowledge and tools to make the right selection in the design phase is fundamental to the durability and energy efficiency of any HVAC or plumbing project. Mechanical system designers can have a significant impact on occupant health and must take steps during the design and

construction phases to ensure efficient system performance, condensation control, long-lasting thermal protection, acoustic benefits and healthier indoor air quality. Armacell's Specification team is here to help Mechanical Engineers and Specifiers with any insulation project. Their full-time job is to support you in any way that helps simplify the HVAC-R and acoustic specification process.

Engineer USP / Value Proposition

- Tailored Solutions for Code Compliance, Performance and Budget
- Trusted Protection for System and Design
- Simple, Safe and Efficient System Integrity
- Drag & Drop Specification Package by Division
- Backed by an Industry Leader with over 60 years' industry experience and a 15-year warranty*

Armacell has a comprehensive Solutions Portfolio designed to meet the needs of your application challenges.

STAKEHOLDER: CONTRACTOR

Installers Make it Happen

Armacell understands the importance of the insulation contractor in the selection and proper installation of mechanical insulation products for equipment, pipes and ducts. Insulation contractors routinely make critical decisions that can – for better or for worse – affect the outcome of the project. These decisions must take into account a variety of factors, including building codes, specific application challenges, insulation capability, as well as time and budget constraints.

We strive to help insulation contractors rise to the challenge of their job in a couple of ways. First, our Technical Managers and Installation Specialists, all of whom are experts in the selection and application of all our foam materials, are fully prepared to respond to any technical questions that may arise. Second, we work closely with an extensive network of distributors so that they can provide a quick response on pricing and availability of our products.

Contractor USP / Value Proposition

- Tailored Solutions for Code Compliance, Performance and Budget
- System and Performance Integrity - Virtually maintenance free
- One system to Support, Insulate and Protect
- Backed by an Industry Leader and a 15-year warranty*
- AQIP Factory Training, Field Support and On-Call Technical Support
- National Distribution Network

Armacell has a comprehensive Solutions Portfolio designed to meet the needs of your application challenges.

STAKEHOLDER: DISTRIBUTORS

Committed to your Success

Distributors and Wholesalers want and need suppliers who are willing to work with them as partners. As a partner, a supplier should be able to provide both the goods and services that enhance the distributorship's growth and helps it adapt as the business climate changes. It's this partnership that inspires confidence and trust in the supplier.

That's what Armacell brings to each one of its distributor/wholesaler relationships. It is a business philosophy that dates back

to 1954 with the introduction of ArmaFlex. Today with six manufacturing operations in the North America, and 24 manufacturing facilities worldwide, Armacell has the capacity and logistics network to reliably meet the inventory demands of distributors. Our product knowledge, innovation and research continue to make us the global leader in elastomeric foam production. We are experts in the industry and are poised to support our distributors in their success.

Distributor USP / Value Proposition

- Tailored Solutions for Code Compliance, Performance and Budget
- Single Sourced Solution
- Job-site Direct Shipping
- Broadest Insulation and Accessory Portfolio
- AQIP Factory Training, Field Support and On-Call Technical Support provided
- Backed by a Leader with over 60 years' industry experience and a 15-year warranty*
- Dedicated Support Teams to support your staff and customers

Armacell has a comprehensive Solutions Portfolio designed to meet the needs of your application challenges.

AT YOUR SERVICE

At Armacell, we are committed to creating an exceptional customer experience. We understand today's Multi-Family trends and challenges and share know-how based on our extensive experience to help you implement your project successfully. We do all we can to give you peace of mind while managing your projects.

ARMAFLEX APPLICATION TRAININGS

To ensure that our insulation materials are installed properly, Armacell has trained thousands of installers around the world. Special training centers have been set up at many locations and we also provide valuable support on site. Several thousand insulators attend courses on installing Armacell products every year and are awarded the Armacell Qualified Installer Program (AQIP) application certificate.

Valuable tips and tricks

Learn to install ArmaFlex more reliably and faster than you do today.

ARMWIN – PROFESSIONAL INSULATION CALCULATIONS

With our powerful ArmWin software, you can carry out all common technical calculations in HVAC applications. You can easily determine the minimum insulation thickness required for condensation control, as well as surface temperature, heat flow, temperature changes in flowing and stationary media, freezing times for water pipes and the most economical insulation thickness.

ArmWin

All-in-one technical
insulation calculations tool.

AT YOUR SERVICE

SPECIFICATION SUPPORT

It is challenging to keep up with changing building codes and evolving materials technology. Armacell employs a team of full-time specification experts dedicated to providing Engineers and Specifiers solutions for complex mechanical systems. They can review and update your specs, advise on new innovations and recommend the best insulation solution for your project.

Lunch & Learn

Providing PDH credits for onsite seminars

EXPERT TECHNICAL SUPPORT

Have a question? We have the most experienced Technical support in the industry and they are ready to take your call. Speak to experts with decades of experience who can answer your technical concerns or offer product advice.

On call

Give our Technical Manager a call if you have questions.

You'll find a wealth of information on our website www.armacell.us. Access our KNOWLEDGE CENTER for document downloads, installation videos, FAQ's and more. Visit the RESOURCES section for content tailored especially to Mechanical Engineers, Insulation Contractors, Distributor / Wholesalers and much more.

10"	-	-	10"	250	11.005	11.205	279.5	284.6

1. ID tolerances are typical values and may differ depending on the product and wall thickness.

2. Insulation ID is sized larger than the pipe OD to fit over copper pipe couplings. When properly installed, a gap between the insulation and pipe will not adversely effect the insulation performance.

3. DN, diametre nominel, is equivalent to NPS sizes in metric dimensions.

NOTE: See installation guide for proper installation instructions.

SOLUTIONS PRODUCTS

13/SOLUTIONS PRODUCTS

Tubes

AP ArmaFlex® White and Black Tubes

Original flexible, closed cell elastomeric tubes in black and white

ArmaFlex® Shield

Continuous coil pipe insulation with durable, protective coating

Imcoa®, Tubolit®, Tundra®

Economical polyethylene insulation for plumbing lines, in semi-slit and self-seal closure

AP ArmaFlex® Black LapSeal

Self-sealing tube insulation with reinforced lap seal

ArmaFlex® Ultra & LapSeal

The first elastomeric pipe insulation Classified by UL to UL 723 at 25/50

ProFlex® Tubes & LapSeal

Economical flexible foam insulation for HVAC/R applications

Sheet and Roll

AP ArmaFlex® & AP ArmaFlex® FS

Original fiber-free insulation for thermal applications

AP ArmaFlex® SA & AP ArmaFlex® FS SA

Fiber-free insulation for thermal applications in self-adhering format

ArmaFlex® Ultra

The first elastomeric insulation Classified by UL to UL 723 at 25/50

ProFlex®

Economical flexible foam insulation for HVAC/R applications

Duct Liner and Wrap

ArmaFlex® Ultra Duct Liner

The first elastomeric duct liner Classified by UL to UL 723 at 25/50

ArmaFlex® Ultra Duct Wrap

The first elastomeric duct wrap Classified by UL to UL 723 at 25/50

Accessories

Armafix® EcoLight Pipe Support

Insulated pipe support with self-adhesive closure

AP ArmaFlex® Insulation Tape

Pressure sensitive foam tape for insulating pipes and fittings

Insuguard® Multi

Tool-free pipe hanger system with adapters for all common mountings

ArmaFlex® Pre-fabricated Fittings

Made to order fittings for T's, Elbows, P Traps and more

ArmaFlex® Black LapSeal Tape

Low profile tape for AP ArmaFlex Black LapSeal end seams

PE Fittings

Pre-fabricated T's and Elbows made of polyethylene

Adhesives and Coatings

520 Adhesive & 520 Black

Recommended adhesive specially formulated for ArmaFlex insulation

520 BLV & Low VOC Spray Adhesive

Low VOC adhesive alternatives

WB Finish

Latex-based, indoor/outdoor, UV-resistant coating for ArmaFlex insulation

OUTDOOR USE:

Painting with WB Finish or other protective jacketing is required to prevent damage to the insulation in exterior applications and to comply with the insulation protection sections of the International Energy Conservation Code (IECC) and ASHRAE 90.1.

BASIC TERMS AND CONDITIONS FOR SOLUTION PORTFOLIO WARRANTY

- All applicable products defined within the Solution Portfolio must be installed to satisfy the system warranty for the defined package.
- This Warranty applies only to the products noted as the approved system components. Armacell will take no responsibility for any labor or other costs associated with the removal, repair, replacement or disposal of the defective Product materials.
- Product installation must be completed by an AQIP trained installer and installed in accordance with Armacell's North American Application Manual, and all other written and technical specifications of Armacell.
- Any defective Product is not discarded, destroyed or altered before inspection by Armacell, or rendered defective or damaged by modifications not made by Armacell, acts of God such as fires, explosions, hurricanes, tornados or earthquakes or by materials installed or stored near the Products.
- Owner/Contractor agrees to permit inspection of the Product installation at the Location at time of install and then at various times throughout the warranty term by Armacell and its representatives upon reasonable request during standard business hours.
- A jobsite inspection by Armacell or one of its appointed representatives will be required to validate package compliance and finalize the warranty request.
- Certificate of Warranty to be issued to the Installing Contractor for the identified project and will be effective from time of purchased.

Full Warranty Details will be provided at time of certificate issuance

All data and technical information are based on results achieved under typical application conditions. It is the customer's responsibility to verify if the product is suitable for the intended application. The responsibility for professional and correct installation and compliance with relevant building regulations lies with the customer. By ordering/receiving product you accept the Armacell General Terms and Conditions of Sale applicable in the region. Please request a copy if you have not received these.

ABOUT ARMACELL

As the inventors of flexible foam for equipment insulation and a leading provider of engineered foams, Armacell develops innovative and safe thermal, acoustic and mechanical solutions that create sustainable value for its customers. Armacell's products significantly contribute to global energy efficiency making a difference around the world every day. With 3,100 employees and 24 production plants in 16 countries, the company operates two main businesses, Advanced Insulation and Engineered Foams. Armacell focuses on insulation materials for technical equipment, high-performance foams for high-tech and lightweight applications and next generation aerogel blanket technology.
